

Group meeting 2 – Group 6
Wednesday 29.11.2023

We presented the changes that we made – deliverables, risk analysis (probability and impact), we showed the work breakdown that we made

We started with the UML diagram

We should change the arrows:

One arrow that points in both ways

Not full arrow head because it means something different

We explained why we created these classes and what we put in them

Remove the extra square around the multiplicities

We have to remove the ids because we are not going to use databases (the ids are not necessary) because the objects talk to each other

Avoid the plurals in the names of the classes

Paper prototype

- Draw the windows forms that we have in mind
- Deadline was last week(design of the user interface)

GIT repository – invite teachers

Process report documentation

Agenda for the meetings

Minutes of meeting

We have to show the agenda and upload everything to GIT

Agenda and minutes (send to everybody)
