Minutes of Group meeting 3

Group 6

6.12.2023

On the 6th of December our group had a meeting regarding group project. While this meeting we discussed what we have done last week. We also asked some questions about project itself.

First of all, Esmée showed the paper prototype that we made The teacher liked it, though it was actually due last week, as stated in the planning on Canvas.

Then, Justin showed our UML diagram. We haven't changed it much since last week, so the feedback was more negative. But we are going to remove squares around numbers, change the type of arrows, add manager classes and methods.

Finally, Nikol showed the progress report and asked what it is supposed to look like. According to the teacher, it should describe the progress more in depth. We should also have list of tasks that we have to do and then a list of tasks that we really did complete during that week. Another thing to add is work division among team members. We also should exclude the group meeting description from the progress report, because we already have it in the minutes document.

Additionally the teacher marked some problems with our agenda, for example, lack of information in terms of title, chair and secretary. We should also upload our agenda to the git that we have.

Summing up, it makes sense to say that we have to work harder. We are falling one week behind and we have a lot of things to work on, so we should catch up. We already have our paper prototype and an almost complete UML class diagram. So, what we are going to do first is finish our UML class design diagram to include methods, manager classes and fix a few mistakes. After that we can split the work that we have to do between ourselves and start the implementation phase of the project.
